Bladder Cancer

Medical Condition

A common type of cancer, which develops in the urinary bladder. This causes back pain, painful urination, frequent urination, and blood in urine.

📊 Rare (Fewer than 200,000 cases per year in US)

🏥 Requires lab test or imaging

👨‍⚕️ Treatable by a medical professional

🕒 Can last several months

It is caused by the abnormal growth of bladder cells. Symptoms may include blood in urine, painful urination and pelvic pain. Treatments include surgery, chemotherapy, and biological therapy.

Symptoms

Symptoms include:

- Blood in urine
- Difficulty in urinating
- Low back pain
- Rapid weight loss
- Loss of appetite
- Swollen feet
- Extreme weakness and tiredness

Metastatic Bladder Cancer: A Review of Current Management

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3197261>

Jun 09, 2011 · A study by Bochner et al. [31] explored the association between traditional prognostic indicators and tumour angiogenesis. Estimated probability of recurrence at 5 years for lowest microvessel counts compared with highest counts were 19% and 68%; respectively, and overall 5 year survival was 68% compared to 34%.
