Use of Orthokeratology for the Prevention of Myopic ...

<https://www.sciencedirect.com/science/article/pii/S0161642018330732>

Apr 01, 2019 · Peripheral hyperopic defocus is associated with greater globe elongation and a more prolate globe shape, resulting in a more myopic central refraction. Orthokeratology lens wear results in a (temporary) flattening of the central cornea, which corrects the central myopic refraction but also changes the peripheral refractive status from relative ...
