Ventricular tachycardia - Symptoms and causes - Mayo Clinic<https://www.mayoclinic.org/diseases-conditions/...>

< Overview Symptoms Causes Risk Factors Complications >

Ventricular tachycardia is a heart rhythm disorder (arrhythmia) caused by abnormal electrical signals in the lower chambers of the heart (ventricles). This condition may also be called V-tach or VT. A healthy heart normally beats about 60 to 100 times a minute at rest. In **ventricular tachycardia**, the heart beats faster than normal, usually 100 or more beats a minute. The chaotic heartbeats prevent the heart chambers from properly filling with blood. As a result, your heart may not be able to pump enough bloo...

Broken heart during treadmill exercise testing: an unusual ...

<https://pubmed.ncbi.nlm.nih.gov/21933774>

We present a novel cause of ST-segment elevation during exercise testing: "broken heart syndrome", also known as **transient left ventricular apical ballooning syndrome**, or **takotsubo cardiomyopathy**. Takotsubo cardiomyopathy is a **rare**, yet well-described, reversible cardiomyopathy triggered by profound psychological or physical stress.
