**Association of frailty with in-hospital outcomes in elderly patients with heart failure**

Yun-Peng Kang, Li-Ying Chen, Jia-Jia Zhu, Wen-Xian Liu, Chang-Sheng Ma

**Abstract**

BACKGROUND

Frailty is prevalent in elderly patients with cardiovascular diseases. However, the

Nov 01, 2019 · Findings In this cohort study of 785 127 participants, frailty as determined by an International Statistical Classification of Diseases and Related Health Problems, Tenth Revision **claims-based frailty** score was associated with a higher risk of 30-day outcomes for acute myocardial infarction, **heart failure**, and pneumonia hospitalizations. When added to traditional comorbidities typically used in risk-adjustment models for these conditions, this **claims-based frailty score** ...

In the FRAIL-HF study, **Vidan et al. ( 2) demonstrated the independent association between frailty and worse 1-year clinical outcomes** among older hospitalized patients with HF. However, few data exist regarding the association of frailty with patient-centered outcomes among older patients who are hospitalized with ADHF.

Nov 01, 2019 · Importance The addition of a claims-based **frailty** metric to traditional comorbidity-based risk-adjustment models for acute myocardial infarction (AMI), **heart failure** (HF), and pneumonia improves the prediction of 30-day mortality and readmission. This may have important implications for hospitals that tend to care for **frail** populations and participate in Centers for Medicare & Medicaid
