Laryngopharyngeal reflux disease management for recurrent laryngeal contact granuloma: A case report

Li K *et al.* Anti-reflux management for laryngeal contact granuloma

Kai Li, Wen-Yong Chen, Yun-Ying Li, Tu-Lu Wang, Meng-Jia Tan, Zong Chen, Hai Chen

Abstract

BACKGROUND

Laryngeal contact granuloma (LCG) is difficult to treat and frequently associated with high persistence and recurrence, despite the availability of both surgical and pharmacological treatment options. An appropriate strategy is therefore needed to help

Laryngopharyngeal Reflux: An Update - SciTeMed Publishing ...
https://scitemed.com/article/2594/Laryngopharyngeal-Reflux-An-Update

Introduction Differences Between Lpr and ... Etiopathogenesis of Lpr

Table with 2 columns: GERD, LPR. Rows include symptoms and characteristics.

Laryngopharyngeal reflux (LPR), also referred to as extra-esophageal reflux, supra-esophageal reflux, or silent reflux, refers to a condition in which gastroduodenal content rises up the esophagus and affects the throat, specifically the laryngopharynx [1-6]. In some cases, gastric content may even reach the nasal cavities and/or ears via the Eustachian tubes, which can exacerbate rhinitis, sinusitis, or otitis media [7-9]. Otolaryn...

https://www.cureus.com/articles/47816...

Introduction Laryngopharyngeal reflux (LPR) is a different entity from gastroesophageal reflux disease (GERD). Patients with LPR usually present with a variety of symptoms such as hoarseness, voice fatigue, burning sensation in the throat, persistent cough, sore throat, dysphagia, a sensation of a lump in the throat, and chronic throat clearing. The management of LPR is based on medications ...

Nov 01, 2018 - Laryngeal granulomas are benign, non-neoplastic, uni- or bilateral lesions that develop in the posterior third of the vocal folds, more specifically in the vocal process or in the arytenoid region (). They represent a repairing, reactive inflammatory process of the local mucosa, secondary to local injury, ulceration, and exposure of the perichondrium of the arytenoid cartilage.

Laryngeal Manifestations of Rheumatoid Arthritis

https://www.hindawi.com/journals/ad/2013/103081

Abstract Introduction Method Treatment Conclusion

Rheumatoid arthritis is a destructive autoimmune disease that affects 3% of the adult population. It is characterized by the formation of both articular and extra-articular lesions with predilection for small joints. There are ubiquitous reports on the head and neck manifestations of RA with emphasis on the larynx. The laryngeal presenting features of this systemic disease may mimic a plethora of medical conditions, inflammatory and neoplastic. The main phonatory and respiratory symptoms are often subtl...
