**Cervical intervertebral disc degeneration and dizziness**

Liu TH *et al.* Cervical discogenic dizziness

Tang-Hua Liu, Yan-Qing Liu, Bao-Gan Peng

### Abstract

Clinical studies have found that patients with cervical degenerative disease are usually accompanied by dizziness. Further clinical studies have shown that anterior cervical surgery can not only eliminate chronic neck pain, cervical radiculopathy or myelopathy,

Dizziness with cervical degenerative disc disease occurs as a consequence of **circulatory disorders of the brain**. The reasons for this are. Displacement of intervertebral disc, which presses on the vertebral artery. The growth of cartilage. Osteochondrosis of the cervical spine changes the structure of the cartilage located between the vertebrae.

Abstract. Objectives: Dizziness often happens in patients with chronic neck pain with only cervical disc degeneration but without cervical radiculopathy or myelopathy. We prospectively selected a series of patients who showed cervical disc degeneration with concomitant chronic neck pain and intractable dizziness who did not respond to conservative treatment to test a new diagnostic method ...

Nov 01, 2018 · Because cervical spondylosis is characterized by cervical intervertebral disc degeneration, the aforementioned studies seem to suggest that the origin of cervicogenic dizziness stems from degenerative cervical intervertebral disc. Thus, in theory, a ...

Spinal degeneration in the neck, also called cervical spondylosis, can result from cervical osteoarthritis, cervical degenerative disc disease, and other wear and tear on the spine over time. As the intervertebral discs and joints break down, nerve roots and blood vessels may become compressed, which might contribute to dizziness in rare cases.
