Antibiotics for eradicating meningococcal carriage: Network meta-analysis and investigation of evidence inconsistency

Asmaa S Abdelhamid, Yoon K Loke, Ibrahim Abubakar, Fujian Song

Abstract

AIM: To compare different antibiotics for eradicating the carriage of *Neisseria meningitidis*, and to investigate heterogeneity and evidence inconsistency.

METHODS: From a search of PubMed and published systematic reviews, we identified 23 trials evaluating 15 antibiotics that could be connected in a trial network. The outcome of interest is the eradication of *N. meningitidis*. We used WinBUGS to conduct random-effects, mixed treatment comparisons. Heterogeneity
