Apr 24, 2018 · Introduction. Understanding the intercellular communication is rapidly becoming the **new frontier** in multi-cellular **organisms**. It is now widely accepted that cell-to-cell communicate not only by direct contact or soluble factors but also through released cell membrane fragments known as extracellular vesicles (EVs) (Howlett and Bissell, 1993; Lee et al., 2011).

1. Introduction. **Gastrointestinal** stromal tumors (GISTs) are considered as a paradigm of molecular biology in solid tumors. Mutational analysis for receptor tyrosine kinase (c-KIT) and platelet-derived growth factor receptor alpha (PDGFRα) genes has a predictive value for sensitivity to targeted therapy.For GIST patients with localized disease who underwent surgical **treatment**, the evaluation ...
