**Non-alcoholic fatty liver disease and cardiovascular concerns: The time for hepatologist and cardiologist close collaboration**

Ashraf H *et al.* NAFLD and cardiovascular concerns

Haleh Ashraf, Shahrokh Karbalai, Raika Jamali

**Abstract**

Nonalcoholic fatty liver disease (NAFLD) emerged as the most common chronic liver cell damage worldwide. It is strongly associated with an increased risk of cardiovascular disease (CVD). There are not enough recommendations for screening

### Nonalcoholic fatty liver disease: implications for ...

<https://journals.lww.com/cardiovascular...>

The profibrogenic-inflammatory liver disease nonalcoholic steatohepatitis affects patient's mortality and overall cardiovascular and liver-related complications. There is an evident overlap between these diseases; therefore, there are important implications for endocrinologists, cardiologists, and hepatologists when treating these patients.

### Non-alcoholic fatty liver disease and heart failure with ...

<https://onlinelibrary.wiley.com/doi/10.1002/ehf2.13222>

Abstract. The prevalence of non-alcoholic fatty liver disease (NAFLD) in heart failure (HF) preserved left ventricular ejection fraction (HFpEF) patients could reach 50%. Therefore, NAFLD is considered an emerging risk factor. In 20% of NAFLD patients, the condition progresses to non-alcoholic steatohepatitis (NASH), the aggressive form of NAFLD characterized by the development of fibrosis in the liver...
