**Pyogenic liver abscess caused by fusobacterium in a 21 year old immunocompetent male**

Zohair Ahmed, Saurabh K Bansal, Sonu Dhillon

### Abstract

A 21 year old male with no significant past medical history, presented with right upper quadrant (RUQ) abdominal pain along with fevers and chills. Lab work revealed leukocytosis, anemia, and slightly elevated alkaline phosphatase. Viral serology for HBV, HCV, and HIV were negative and he was immunocompetent. Computed tomography (CT) imaging revealed hepatic abscesses, the largest measuring 9.5 cm. Empiric antibiotics were started and percutaneous drains
