Exclusive enteral nutrition in children with Crohn disease

Andrew S Day, Robert N Lopez

Abstract

Exclusive enteral nutrition involves the use of a complete liquid diet, with the exclusion of normal dietary components for a defined period of time as a therapeutic measure to induce remission in active Crohn disease. This very efficacious approach leads to high rates of remission, especially in children and adolescents newly diagnosed with Crohn disease (CD). This intervention also results in mucosal healing, nutritional improvements and enhanced bone health. Whilst several recent studies have provided further elaboration of the roles of exclusive
