Retrospective Study

Management of hepatocellular carcinoma rupture in the caudate lobe

De-Fei Hong, Ying-Bin Liu, Shu-Yan Peng, Jin-Zhong Peng, Zhi-Fei Wang, Jun Cheng, Guo-Liang Shen, Yuan-Bao Zhang

Abstract

AIM: To demonstrate that caudate lobectomy is a valid treatment in such cases based on our experience with the largest case series reported to date.

METHODS: A retrospective study of eight patients presenting with spontaneous rupture and hemorrhage of hepatocellular carcinoma (HCC) in the caudate lobe was conducted. Two patients underwent ineffective transarterial embolization
