**Alcohol liver disease: A review of current therapeutic approaches to achieve long-term abstinence**

Maria Luisa Gutiérrez-García, Sara Blasco-Algora, Conrado M Fernández-Rodríguez

**Abstract**

Harmful alcohol drinking may lead to significant damage on any organ or system of the body. Alcoholic liver disease (ALD) is the most prevalent cause of advanced liver disease in Europe. In ALD, only alcohol abstinence was associated with a better long-term survival. Therefore, current effective therapeutic strategy should be oriented towards achieving alcohol abstinence or a significant reduction in alcohol consumption. Screening all primary care patients to detect those cases with alcohol
