Endoscopic surveillance of gastric cancers after *Helicobacter pylori* eradication

Masaaki Kobayashi, Yuichi Sato, Shuji Terai

Abstract

The incidence and mortality of gastric cancer remains high in East Asian countries. Current data suggest that *Helicobacter pylori* (*H. pylori*) eradication might be more effective for preventing gastric cancer in young people before they develop atrophic gastritis and intestinal metaplasia. However, the long-term effect of *H. pylori* eradication on metachronous cancer prevention after endoscopic resection (ER) of early gastric cancer remains controversial, with some discordance between results
