Impact of new treatment options for hepatitis C virus infection in liver transplantation

Elda Righi, Angela Londero, Alessia Carnelutti, Umberto Baccarani, Matteo Bassetti

Abstract

Liver transplant candidates and recipients with hepatitis C virus (HCV)-related liver disease greatly benefit from an effective antiviral therapy. The achievement of a sustained virological response before transplantation can prevent the recurrence of post-transplant HCV disease that occurs universally and correlates with enhanced progression to graft cirrhosis. Previous standard-of-care regimens (*e.g.*, pegylated-interferon plus ribavirin
