Hepatitis C virus infection: Are there still specific problems with genotype 3?

Claire Gondeau, Georges Philippe Pageaux, Dominique Larrey

Abstract

Hepatitis C virus infection is one of the most common causes of chronic liver disease and the main indication for liver transplantation worldwide. As promising specific treatments have been introduced for genotype 1, clinicians and researchers are now focusing on patients infected by non-genotype 1 hepatitis C viruses, particularly genotype 3. Indeed, in the golden era of direct-acting antiviral drugs, genotype 3 infections are no longer considered as easy to treat and are associated with higher
