### **Sphincter ultrasound lesions after transanal endoscopic surgery (TEO/TEM)**

Mora López Laura, Serra-Aracil Xavier, Navarro Soto Salvador

#### **Abstract**

**AIM:** Ultrasound study to assess the morphological impact of transanal endoscopic surgery on the sphincter apparatus, using the modified Starck classification.

**METHODS:** Prospective, observational study of 118 consecutive patients undergoing TEO/TEM from March 2013 to May 2014. All patients underwent endoanal ultrasound prior to surgery and one month and four months post-surgery in order to measure sphincter width, to identify sphincter defects and to quantify them in terms of level of anal canal affected, depth and size. To assess the lesions we applied the "modified" Starck classification, which incorporates the variable "sphincter fragmentation". The results were correlated with the Wexner incontinence questionnaire.

**RESULTS:** Of the 118 patients, twelve who presented sphincter lesions on the
