Basic Study

Adult mouse model of early hepatocellular carcinoma promoted by alcoholic liver disease

Aditya Ambade, Abhishek Satishchandran, Benedek Gyongyosi, Patrick Lowe, Gyongyi Szabo

Abstract

AIM: To develop a mouse model of alcohol-driven hepatocellular carcinoma (HCC) that develops in livers with alcoholic liver disease (ALD).

METHODS: Adult C57BL/6 male mice received multiple doses of chemical carcinogen diethyl nitrosamine (DEN) followed by 7 wk of 4% Lieber-DeCarli diet. Serum alanine

Match Overview
