**HER2 heterogeneity in gastric/gastroesophageal cancers: From benchside to practice**

Federica Grillo, Matteo Fassan, Francesca Sarocchi, Roberto Fiocca, Luca Mastracci

#### Abstract

HER2 is overexpressed in approximately 10-20% of gastric and gastroesophageal junction carcinomas. In these types of cancer, accurate assessment of HER2 status is mandatory, for selecting patients who may benefit from targeted therapies with anti-HER2 drugs such as Trastuzumab. This manuscript focuses on HER2 in gastric carcinogenesis, on optimal evaluation of HER2 and on the possible causes which may contribute to inaccurate HER2 evaluation. Similarly to breast cancer HER2 evaluation, standardization of HER2 testing in gastric cancer is necessary in diagnostic practice. The three principle aspects which require
