Predictive factors of short term outcome after liver transplantation: A review

Giuliano Bolondi, Federico Moccheggiani, Roberto Montalti, Daniele Nicolini, Marco Vivarelli, Lesley De Pietri

Abstract

Liver transplantation represents a fundamental therapeutic solution to end-stage liver disease. The need for liver allografts has extended the set of criteria for organ acceptability, increasing the risk of adverse outcomes. Little is known about the early postoperative parameters that can be used as valid predictive indices for early graft function.
