Pancreatic cancer stem cell markers and exosomes - the incentive push

Heiler S *et al.* Pancreatic cancer stem cell markers

Sarah Heiler, Zhe Wang, Margot Zöller

Abstract

Pancreatic cancer (PaCa) has the highest death rate and incidence is increasing. Poor prognosis is due to late diagnosis and early metastatic spread, which is ascribed to a minor population of so called cancer stem cells (CSC) within the mass of the primary tumor. CSC are defined by biological features, which they share with adult stem cells like longevity, rare cell division, the capacity for self renewal, differentiation, drug resistance and the requirement for a niche. CSC can also be identified by sets of
