Pleiotropic effects of statins in the diseases of the liver

Martin Janicko, Sylvia Drazilova, Daniel Pella, Jan Fedacko, Peter Jarcuska

Abstract

Statins are a class of molecules that inhibit HMG CoA reductase. They are usually prescribed as a lipid lowering medication. However, there is accumulating evidence that statins have multiple secondary effects both related and unrelated to their lipid-lowering effect. This narrative review of the literature aims to provide the reader
