**Re-evaluation of classical prognostic factors in resectable ductal adenocarcinoma of the pancreas**

Daniel Åkerberg, Daniel Ansari, Roland Andersson

### Abstract

Pancreatic ductal adenocarcinoma carries a poor prognosis with annual deaths almost matching the reported incidence rates. Surgical resection offers the only potential cure. Yet, even among patients that undergo tumor resection, recurrence rates are high and long-term survival is scarce. Various tumor-related factors have been identified as predictors of survival after potentially curative resection. These
