Management of psoriasis patients with hepatitis B or hepatitis C virus infection

Claudio Bonifati, Viviana Lora, Dario Graceffa, Lorenzo Nosotti

Abstract

The systemic therapies available for the management of PsO patients who cannot be treated with more conservative options, such as topical agents and/or phototherapy, with the exception of acitretin, can worsen or reactivate a chronic infection. Therefore, before administering immunosuppressive therapies with either conventional disease-modifying drugs (cDMARDs) or biological ones (bDMARDs) it is mandatory to screen patients for some infections, including HBV and HCV. In particular, the patients eligible to receive an
