Antibiotics for Treatment of Inflammatory Bowel Disease

Orna Nitzan, Mazen Elias, M.D., Avi Peretz, Ph.D., Walid Saliba

Abstract

Inflammatory bowel disease is thought to be caused by an aberrant immune response to gut bacteria in a genetically susceptible host. The gut microbiota plays an important role in the pathogenesis and complications of the two main inflammatory bowel diseases: Crohn's disease and ulcerative colitis. Alterations in gut microbiota, and specifically reduced intestinal microbial diversity, have been found to be associated with chronic gut inflammation in
