Hepatitis C in non-hepatic solid organ transplant candidates and recipients: A new horizon

Belga S *et al.* HCV in non-hepatic solid organ transplantation

Sara Belga, Karen Elizabeth Doucette

Abstract

Hepatitis C virus (HCV) infection is estimated to affect 130-150 million people globally which corresponds to 2%-3% of the total world population. It remains the leading indication for liver transplant worldwide and has been demonstrated to negatively impact both patient and graft survival following non-hepatic organ transplantation. In the era of interferon-based therapy, although treatment and cure of HCV prior to non-
