Liver surgery in cirrhosis and portal hypertension

Christina Hackl, Hans J Schlitt, Philipp Renner, Sven A Lang

Abstract

The prevalence of hepatic cirrhosis in Europe and the United States, currently 250 patients per 100.000 inhabitants, is steadily increasing. Thus, we observe a significant increase in patients with cirrhosis and portal hypertension needing liver resections for primary or metastatic lesions. However, extended liver resections in patients with underlying hepatic cirrhosis and portal hypertension still represent a medical
