[Long-term follow-up and outcome of liver transplantation from anti-hepatitis C virus-positive donors: a European multicentric case-control study](#)

R Ballarin, [A Cucchetti](#), M Spaggiari, R Montalti... - ..., 2011 - journals.lww.com

Background. The growing prevalence of hepatitis C virus (HCV) infection in the general population has resulted in an increased frequency of potential organ donors that carry the virus. Given the significant disparity between organ supply and demand for transplantation ...

[Long-term follow-up and outcome of liver transplantation from anti-hepatitis C virus-positive donors: a European multicentric case-control study](#)

R Ballarin, [A Cucchetti](#), M Spaggiari, R Montalti... - ..., 2011 - journals.lww.com

Background. The growing prevalence of hepatitis C virus (HCV) infection in the general population has resulted in an increased frequency of potential organ donors that carry the virus. Given the significant disparity between organ supply and demand for transplantation, it becomes essential to consider whether livers from anti-HCV-positive donors may be considered suitable for transplantation. Methods. Based on a multicenter European ...

[Long term follow-up and outcome of liver transplantation for alcoholic liver disease: a single center case-control study](#)

[M Biselli](#), [A Gramenzi](#), M Del Gaudio... - Journal of clinical ..., 2010 - journals.lww.com

Results: Actuarial survival rate at 9 years was comparable for cases and controls. Actuarial graft survival rate at 9 years was significantly higher in cases (78% vs. 60%; P= 0.026). The retransplantation rate was higher in controls (21% vs. 4%; P= 0.007). Post-OLT complications were not significantly different. The alcoholic recidivism rate was 28% without influence on patients or graft survival, whereas relapse of HCV caused the majority of ...
