Expression and role of nuclear receptor coregulators in colorectal cancer

Mouna Triki, Marion Lapierre, Vincent Cavailles, Raja Mokdad-Gargouri

### Abstract

Colorectal cancer (CRC) is one of the most common human cancers and the cause of about 700000 deaths per year worldwide. Deregulation of the WNT/ $\beta$ -catenin pathway is a key event in CRC initiation. This pathway interacts with other nuclear signaling pathways, including members of the nuclear receptor superfamily and their transcription coregulators. In this review, we provide an overview of the literature dealing with the main coactivators (NCoA-1 to 3, NCoA-6, PGC1- $\alpha$ , p300,
