**Locoregional therapy response in patients with hepatocellular cancer waiting for liver transplantation: Only selection or biological effect?**

Lai Q *et al.* Locoregional treatments and HCC

Quirino Lai, Michele Di Martino, Pierleone Lucatelli, Gianluca Mennini

### Abstract

Locoregional treatments (LRT) represent a broad strategy used for reducing the risk of drop-off and contextually improving the survivals in patients with hepatocellular cancer (HCC) receiving a liver transplantation (LT). However, it is not sufficiently clear if LRT are only a surrogate of tumor aggressiveness or if they consent a real benefit in terms of tumor stabilization. A recent study by Pommergaard *et al* reported the results from the European
