Jul 05, 2018 · **Acute pancreatitis** (AP) is associated with considerable morbidity and mortality. Current severity scores include multiple variables and some of them are only complete within 48 h of admission. **Red cell distribution width** (RDW) is a simple and routine parameter that seems to be related to inflammatory status. Our aims were to evaluate the diagnostic **value** of RDW in severity and mortality ...

Prognostic value of admission red blood cell distribution ...

atm.amegroups.com/article/view/15833/16257 ▼

Background: **Red blood cell distribution width** (RDW) has been proved to be a strong **prognostic** marker in various diseases such as cardiovascular diseases, renal failure, viral hepatitis etc. But its **prognostic value** in **acute pancreatitis** (AP) remains controversial. The aim of this systematic review is to determine the **prognostic value** of RDW in AP.
