Esophagogastric junction outflow obstruction: Where are we now in diagnosis and management?

Samo S *et al.* Esophagogastric junction outflow obstruction

Salih Samo, Emad Qayed

Abstract

Esophagogastric junction outflow obstruction (EGJOO) is a major motility disorder based on the Chicago Classification of esophageal motility disorders. This entity involves a heterogenous group of underlying etiologies. The diagnosis is reached by performing high-resolution manometry. This reveals evidence of obstruction at the esophagogastric junction, manifested by an elevated integrated relaxation pressure
