Triggers of histologically suspected drug-induced colitis

Brechmann T *et al.* Triggers of drug-induced colitis

Thorsten Brechmann, Katharina Günther, Matthias Neid, Wolff Schmiegel, Andrea Tannapfel

**Abstract**

**BACKGROUND**

Drug toxicity is a common and even serious problem in the gastrointestinal tract that is thought to be caused by a broad spectrum of agents. Although withdrawal of the causative agent would cure the disease knowledge is scarce and mostly derives from case reports and series.

**AIM**

To investigate potential triggers of drug-induced colitis (DiC).

**METHODS**

We conducted a retrospective, observational case control study. Patients were assigned to DiC or one of two age- and gender-matched control groups (non-inflammatory controls and inflammatory colitis of another cause) based on histopathological findings. Histopathology

2018年11月28日 - Medications and smoking have been implicated as being causative or triggering flares of microscopic colitis (table 1). Diarrhea in microscopic colitis is likely caused by mucosal inflammation. However, concurrent bile acid malabsorption frequently coexists in patients with collagenous colitis.
