Sep 06, 2019 · Various kinds of endoscopic modalities have been used for the treatment of Bouveret syndrome. Electrohydraulic lithotripsy (EHL) using double balloon endoscopy (DBE) is considered very effective, especially for the treatment of Bouveret syndrome caused by gallstone impaction in the horizontal part of the duodenum.

Here we present the first case of Bouveret syndrome secondary to choledochoduodenal fistula complicating peptic duodenal ulcer managed successfully via endoscopic mechanical lithotripsy. Case . 86-year-old male with a medical history significant for coronary artery disease and stage 3 colorectal cancer status after resection and chemoradiation ...

Gastric outlet obstruction secondary to the impaction of large biliary stones into the duodenum (Bouveret's syndrome) is a well-known complication of biliary lithiasis, most often requiring surgical intervention. We report a case of successful endoscopic removal of a large stone impacted in the duodenal bulb by means of mechanical lithotripsy.
