Special Issue "Endoscopic Diagnosis and Treatment of Early ..."
<https://www.mdpi.com/journal/cancers/special...>

Dear Colleagues, The most common form of gastric cancer develops through a well-established precancerous inflammatory cascade pathway. The first stage, active chronic inflammation, progresses from non-atrophic gastritis to multifocal atrophic gastritis, gastric intestinal metaplasia, dysplasia, and eventually early and finally invasive cancer.

Endoscopic Diagnosis and Management of Gastrointestinal ...
<https://www.cancernetwork.com/view/endoscopic...>

Oct 01, 1995 Tada et al reported a 5-year survival rate of 83.9% in 82 patients with early gastric cancer who were treated by strip biopsy, as compared with a rate of 89.3% in 27 patients who underwent surgical treatment [37]. Endoscopic treatment may be appropriate for selected patients with superficial gastric cancer who are unable or unwilling to undergo surgery, for focal areas of severe dysplasia, and for the rare gastric sessile villous adenoma.

PEOPLE ALSO ASK

How is endoscopy used to diagnose gastric cancer?

When to have an endoscopy for low grade dysplasia?

How is endoscopic imaging used to diagnose GC?

What do you need to know about gastric metaplasia?

Special Issue "Endoscopic Diagnosis and Treatment of Early ...

<https://www.mdpi.com/journal/cancers/special...> ▾

Dear Colleagues, The most common form of gastric cancer develops through a well-established precancerous inflammatory cascade pathway. The first stage, active chronic inflammation, progresses from non-atrophic gastritis to multifocal atrophic gastritis, gastric intestinal metaplasia, dysplasia, and eventually early and finally invasive cancer.

Endoscopic Diagnosis and Management of Gastrointestinal ...

<https://www.cancernetwork.com/view/endoscopic...> ▾

Oct 01, 1995 · Tada et al reported a 5-year survival rate of 83.9% in 82 patients with early gastric cancer who were treated by strip biopsy, as compared with a rate of 89.3% in 27 patients who underwent surgical treatment [37]. Endoscopic treatment may be appropriate for selected patients with superficial gastric cancer who are unable or unwilling to undergo surgery, for focal areas of severe dysplasia, and for the rare gastric sessile villous adenoma.

Nov 12, 2019 · After complete eradication (endoscopic and histologic) of intestinal metaplasia has been achieved with BET, surveillance endoscopy with biopsies should be performed at the following intervals: for baseline diagnosis of HGD/esophageal adenocarcinoma: at 3, 6, and 12 months and annually thereafter; and baseline diagnosis of low-grade dysplasia: at 1 and 3 years.
