Feb 11, 2021 - Malignant pancreatic tumors are rare in children and adolescents, with an incidence of 0.46 cases per 1 million individuals younger than 30 years. [1 - 4] The primary pancreatic tumors of childhood can be classified into the following four categories: Solid pseudopapillary tumor of the pancreas. Pancreatoblastoma.

Genetics and Hereditary Factors of Pancreatic Cancer ...

<https://www.pancreas.org/facing-pancreatic-cancer/...>

Mutations that happen during a person's lifetime, rather than inherited mutations, cause most pancreatic cancers. These mutations cannot be passed from parent to child. But in some cases, mutated DNA passes from generation to generation. These are called germline mutations.

Childhood Pancreatic Cancer Treatment (PDQ®)–Patient ...

<https://www.cancer.gov/types/pancreatic/patient/child-pancreatic-treatment-pdq>

Pancreatic cancer is a disease in which malignant (cancer) cells form in the tissues of the pancreas. There are four types of pancreatic cancer in children. Signs and symptoms of pancreatic cancer include feeling tired and weight loss. Tests that examine the pancreas are used to help diagnose pancreatic cancer.

Childhood Cancers on the Rise: Colon Cancer, Pancreatic Cancer

<https://www.insider.com/childhood-cancers-teens...>

Sep 10, 2020 - Shutterstock. Age is the most significant risk factor for cancer, and the median age for a cancer diagnosis is 66 years old. While cancer in kids, teens, and young adults is pretty rare, there are at least 11 different forms of cancer that are on the rise in young people. Doctors suspect that lifestyle factors like poor diets and extra body fat may play a key role in fueling some of these cancers, which include colon, kidney, and pancreas ...

Pancreatic Cancer

Medical Condition

Cancer of pancreas, an organ which is behind the lower part of the stomach. This causes abdominal pain, jaundice, itchy skin, fatigue and weight loss.

Rare (Fewer than 200,000 cases per year in US)

Often requires lab test or imaging

Treatable by a medical professional

Can last several months or years

The exact cause of pancreatic cancer is unknown. Risk factors include diabetes, chronic pancreatitis and stomach ulcer. In the early stage, it is asymptomatic. Common symptoms at later stages are weight loss and abdominal pain. Treatment depends on the location of tumor, age and general health. Treatment includes surgery, chemotherapy and radiation.

Symptoms

Early stage of pancreatic cancer may be asymptomatic. Symptoms will show up only when the disease progresses and include:

- Digestive problems, including abnormal stools, nausea or vomiting
- Pain in the upper abdomen and back
- Loss of appetite
- Sudden weight loss
- Jaundice (yellowing of the skin and whites of the eyes)
- Very high sugar levels in diabetic patients

Treatments

Treatment depends on the location of tumor, age and general health. Treatment includes surgery, chemotherapy and radiation.

Medication

- Chemotherapy: Drugs, either taken orally or through injection, kills the cancer cells. In advanced stages, it only helps control growth of cancer cells.
- 5-Fluorouracil Casopitabine Irinotecan Oxaliplatin

Medical procedures: Tumor excision - Distal pancreatectomy - Total pancreatectomy

Therapies: Radiation therapy

Abstract

The presence of pancreatic cancer during childhood is extremely rare, and physicians may be tempted to overlook this diagnosis based on age criteria. However, there are primary malignant pancreatic tumors encountered in pediatric patients, such as
