The Role of Hepatitis B Core-Related Antigen

<https://pubmed.ncbi.nlm.nih.gov/31075974>

Hepatitis B core-related antigen (HBcrAg) is a novel biomarker that has an important role in chronic hepatitis B (CHB), because it correlates with serum HBV DNA and intrahepatic cccDNA. In clinical...

Retrospective Cohort Study

Serum hepatitis B core-related antigen as a surrogate marker of hepatitis B e antigen seroconversion in chronic hepatitis B

Abstract

BACKGROUND

Quantitative hepatitis B core-related antigen (qHBcrAg) has a better correlation with intrahepatic hepatitis B virus (HBV) covalently closed circular DNA (cccDNA) than HBV DNA or hepatitis B e antigen (HBeAg), but data are still lacking for its clinical application.

AIM

This study aimed to investigate the serum qHBcrAg levels in patients with chronic

Hepatitis B core-related antigen predicts disease ...

<https://pubmed.ncbi.nlm.nih.gov/34057248>

May 31, 2021 · Background/aim: The **serum hepatitis B core-related antigen** (HBcrAg) is considered a **surrogate marker** of the amount and activity of intrahepatic covalently closed circular (ccc) DNA. This study aims to investigate the virological characteristics of HBcrAg in **chronic hepatitis B** (CHB) patients and to reveal the hepatocellular carcinoma (HCC) HCC risk factors of HBeAg-negative patients.
