Peri-operative management of patients with type-2 diabetes ...

<https://pubmed.ncbi.nlm.nih.gov/29230803>

Abstract. In this open-label multicentre randomised controlled trial, we investigated three peri-operative treatment strategies to lower glucose and reduce the need for rescue insulin in patients aged 18-75 years with type-2 diabetes mellitus undergoing non-cardiac surgery. Patients were randomly allocated using a web-based randomisation program to premedication with liraglutide (liraglutide ...
