New-onset diabetes mellitus after kidney transplantation: Current status and future directions

Sneha Palepu, GV Ramesh Prasad

Abstract

A diagnosis of new-onset diabetes after transplantation (NODAT) carries with it a threat to the renal allograft, as well as the same short- and long-term implications of type 2 diabetes seen in the general population. NODAT usually occurs early after transplantation, and is usually diagnosed according to general population guidelines. Non-modifiable risk factors for NODAT include advancing age, African American,
