**Eating disorders in adolescents with type 1 diabetes - Challenges in diagnosis and treatment**

Orit Pinhas-Hamiel, Uri Hamiel, Yael Levy-Shraga

**Abstract**

Eating disorders (ED) are characterized by a persistent disturbance of eating that impairs health or psychosocial functioning. They are associated with increased rates of medical complications and mortality. Insulin omission is a unique purging behavior available to individuals with type 1 diabetes mellitus (T1DM). The standard treatment regimen for T1DM requires a major focus on food and eating patterns. Moreover, intensive insulin therapy is
