Psychological themes that influence self-management of Type 1 diabetes

Clare Shaban,

Abstract

It has long been accepted that psychological factors adversely influence efforts to optimise glycaemic control. These are often unrecognised in terms of clinical assessment and therefore under reported. This essay presents an introduction to psychological issues that interact with psychiatric co-morbidities and diabetes-specific distress, and a case scenario illustrating the interconnectedness of presenting problems and themes. In the way that we cannot separate carbohydrate counting, blood glucose monitoring (BGM) and insulin dose adjustment in the understanding of a presenting problem such as poor control, so we can-
