### Assessment of cardiovascular risk in diabetes: Risk scores and provocative testing

Teresa Lam, Kharis Burns, Mark Dennis, N Wah Cheung, Jenny E Gunton

#### Abstract

Cardiovascular disease (CVD) is the leading cause of morbidity and mortality among patients with diabetes mellitus, who have a risk of cardiovascular mortality two to four times that of people without diabetes. An individualised approach to cardiovascular risk estimation and management is needed. Over the past decades, many risk scores have been developed to predict CVD. However, few have been externally validated in a diabetic population and limited studies have examined the impact of applying a prediction model in clinical practice.

Currently, guidelines are focused on testing for CVD in symptomatic patients. Atypical
