Serum hepcidin concentrations and type 2 diabetes

Alex Aregbesola, Sari Voutilainen, Jyrki K. Virtanen, Adeola Aregbesola, Tomi-Pekka Tuomainen

Abstract

Hepcidin is a peptide hormone with both paracrine and endocrine functions that help in maintaining body iron stores. Type 2 diabetes (T2D) is one of the sequelae of excess body iron stores; thus, iron regulatory hormone hepcidin may have a direct or at least an indirect role in the aetiopathogenesis of T2D. Both human and animal studies at molecular and genetic levels have attempted to establish a role for hepcidin in the development of
