Importance of telemedicine in diabetes care: Relationships between family physicians and ophthalmologists

Pedro Romero-Aroca, Ramon Sagarra-Alamo, Alicia Pareja-Rios, Maribel López

Abstract

Diabetic retinopathy (DR) is the worldwide leading cause of legal blindness. In 2010, 1.9% of diabetes mellitus (DM) patients were legally blind and 10.2% had visual impairment. The control of DM parameters (glycemia, arterial tension and lipids) are the gold standard for preventing DR complications, although, unfortunately, DR still appeared in a 25% to 35% of patients. The stages of severe vision threatening diabetic retinopathy (SVTDR), include proliferative diabetic retinopathy (6.96%) and diabetic macular edema (DME) (6.81%). This review aims to update our knowledge on diabetic retinopathy screening using Telemedicine, the different techniques, the problems, and the
