## Application and progress of medical imaging in total mesopancreas excision for pancreatic head carcinoma

Application of Imaging in pancreatic head carcinoma

### Abstract

Pancreatic head carcinoma (PHC) is one of the common gastrointestinal malignancies with a high morbidity and poor prognosis. At present, radical surgery is still the curative treatment for PHC. However, in clinical practice, the actual R0 resection rate, the local recurrence rate, and the prognosis of PHC are unsatisfied. Therefore, the concept of total mesopancreas excision (TMpE) is proposed to achieve R0 resection. Although there have various controversies and discussions on the definition, the range of excision and clinical prognosis of TMpE, the concept of TMpE can be effectively

## Nakao mesenteric approach in pancreatoduodenectomy for ...

<https://journals.lww.com/jpancreatology/Fulltext/...>

The **mesopancreas** is the second portion of the **pancreatic head** nerve plexus. Isolated PD is the ideal surgery for **pancreatic head** cancer from both surgical and oncological viewpoints. In patients with resectable **pancreatic head** cancer, isolated PD using the mesenteric approach is suspected to have a higher survival rate than conventional PD using Kocher's maneuver. The precise surgical techniques of ...

## Artificial intelligence in pancreatic disease

<https://www.wjgnet.com/2644-3260/full/v1/i1/19.htm> ▼

Artificial intelligence (AI) describes the use of computers to simulate performance and critical thinking equivalent to a human being. Its **application** in radiology has been growing rapidly, powered by the availability of large datasets, advances in computing power, and newly developed algorithms[]. The **progress** in AI of **medical imaging** analyses has converted these images into quantitative and ...
