Lymphatic spreading and lymphadenectomy for esophageal carcinoma

Xiang Ji, Jie Cai, Yao Chen, Long-Qi Chen

### Abstract

Esophageal carcinoma (EC) is a highly lethal malignancy with a poor prognosis. One of the most important prognostic factors in EC is lymph node status. Therefore, lymphadenectomy has been recognized as a key that influences the outcome of surgical treatment for EC. But the lymphatic drainage system of the esophagus including an abundant lymph-capillary network in the lamina propria and muscularis mucosa is very complex with cervical, mediastinal and
