Mortality and morbidity in necrotizing pancreatitis managed on principles of step-up approach: 7 year experience from a single surgical unit

Deshpande A A, Sunil Kumar K, Shukla K

Abstract

Introduction: Necrotising Pancreatitis is a challenging clinical problem and the mortality rates associated with infected necrosis remain high. Conservative management is now the key to managing early pancreatitis. It is advised to delay any intervention to later than the third week if possible. Step-up approach is recommended when possible to treat these patients. We reviewed our management of necrotizing
