**Abstract**

Gastric neuroendocrine tumors are gastric neoplasms originating from enterochromaffin type cells and are inserted in a larger group, named gastroenteropancreatic neuroendocrine tumors. They are considered rare and variable in terms of their clinical, morphological and functional characteristics, and may be indolent or aggressive. They are classified into types I, II and III,

<https://link.springer.com/article/10.1007/s11894-019-0684-7>

Mar 12, 2019 - Purpose of **Review** The **diagnosis** of **gastric neuroendocrine tumors** (NETs) is being made with increased frequency likely as a result of more upper endoscopies being done for unrelated reasons. It is therefore vital that **gastroenterologists** become familiar with the basic work-up and management of patients found to have these **tumors**.

## Neuroendocrine Tumors

Medical condition

Neuroendocrine tumors are abnormal growths that begin in specialized cells called neuroendocrine cells. Neuroendocrine cells have traits similar to nerve cells and to hormone-producing cells.

[MayoClinic](#)

### Symptoms

Neuroendocrine/carcinoid tumors can be found during examinations for unrelated reasons. Patients may also experience symptoms associated with the disease in their pancreas or small intestine, rather than liver complications. Patients with...

### Causes

They might be certain diseases or other situations you don't have any control over, like how old you are.

Keep in mind, just because you have a higher risk for NETs doesn't mean you'll get a tumor. But talk to your doctor if you find yourself...

### Treatments

Getting the right treatment for your neuroendocrine tumor (NET) starts with a little fact-finding. The most important thing you need to figure out is where the disease started and if it's spread to a new spot.

If your tumor is small and is growing...
