Immune cell interplay in colorectal cancer prognosis

Samuel E Norton, Kirsten A Ward-Hartstonge, Edward S Taylor, Roslyn A Kemp

Abstract

The immune response to colorectal cancer has proven to be a reliable measure of patient outcome in several studies. However, the complexity of the immune response in this disease is not well understood, particularly the interactions between tumour-associated cells and cells of the innate and adaptive immune system. This review will discuss the relationship between cancer associated fibroblasts and macrophages, as well as between
