Fish oils in parenteral nutrition: why could these be important for gastrointestinal oncology?

Lynnette R Ferguson

Abstract

By the time a gastroenterology patient is moved to parenteral nutrition, he or she is usually in poor health. All parenteral nutrition formulae contain essential nutrients, avoiding components that could cause an adverse reaction. The lipid component is often provided by a soy extract, containing all the fatty acids considered to be essential in the diet. Several trials have considered parenteral nutrition formulas with added fish oils, high in the long chain polyunsaturated fatty acids,
